

Agglomerated Welding Flux BF 1

Flux type: Aluminate-Rutile

Classification: ISO 14174 – S A AR 1 76 AC H5*

Characteristics:

Designed for all SAW-processes and welding of ordinary carbon-manganese, low alloy structural and boiler quality steels with yield strength up to 355 MPa ($t < 25$ mm) in combination with wire grades S1, S2, S2Mo and SCrMo1. The flux is suitable for high speed welding (up to 2 m/min.) and provides very good weld bead appearance and excellent slag release even with small angle preparation and fillet welds. The chemical nature of BF 1 flux

provides high resistance to cracking on single pass applications. Additional features are resistance to porosity when welding rusty plates, heavy scale or other contaminations of plate surfaces (e.g. special primer-coatings) and low sensitivity to arc blow.

Application:

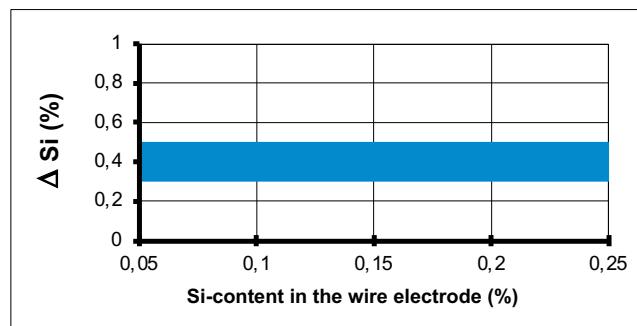

Preferentially used for single-run, two-run and fillet SA-welding. Main fields of application include structural steelwork, thin-walled containers, LP-gas cylinders and fin-tube walls.

Characteristic chemical Constituents:

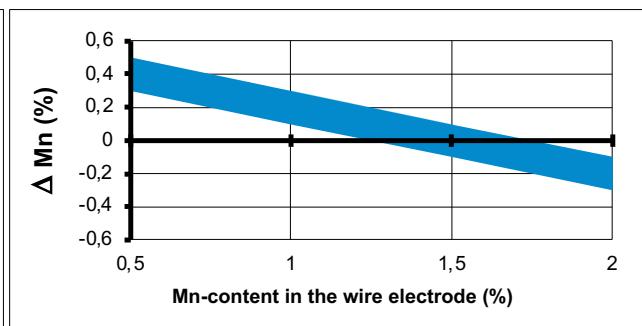

$\text{SiO}_2 + \text{TiO}_2$	$\text{Al}_2\text{O}_3 + \text{MnO}$	$\text{CaO} + \text{MgO}$	CaF_2
25 %	55 %	5 %	10 %
Basicity according to Boniszewski: ~0.6			

Metallurgical behaviour acc. to ISO 14174 type of current DC:

Pick-up Silicon

Pick-up/Burn-out Manganese

Flux density: 1.0 kg/dm³ (!)

Grain size acc. to ISO 14174: 2–16; 2–12; 2–20

Current-carrying capacity: up to 800 A (DC or AC)
using one wire

* Diffusible hydrogen content H5: determined in deposited metal acc. to the method described in ISO 3690 Type of current DC; redrying conditions 150–200 °C

All-weld metal multiple pass classification of wire-flux combinations:

Post Weld Heat Treatment: * 680 °C/10 h

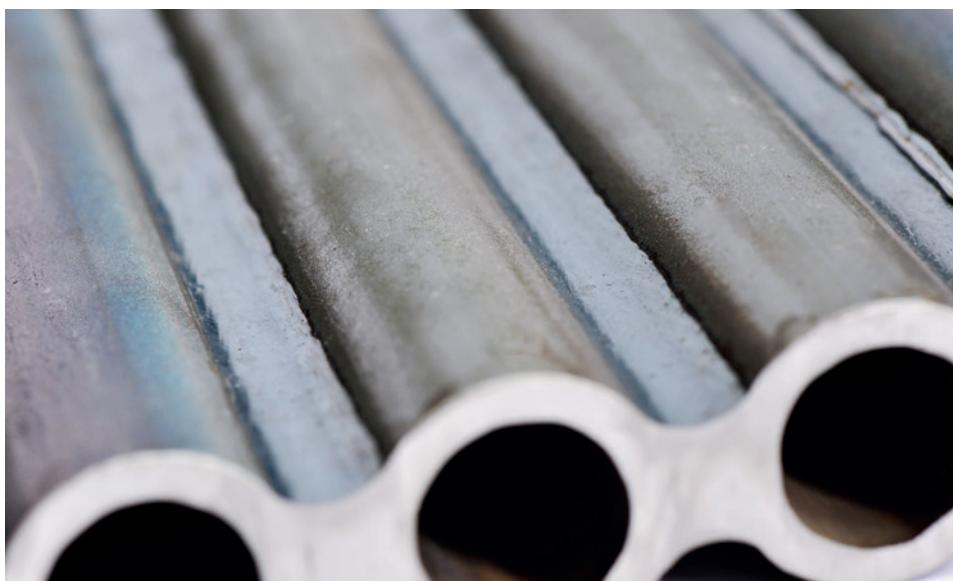

Packaging: 27.5 kg PE-Bags or 500–1,250 kg Big Bags

Storage: Unopened originally packed flux bags can be stored up to one year in dry storage rooms after date of delivery ex-factory.

Redrying conditions specific to the flux:

150–200 °C effective flux temperature

BF 1 + EA2 Wire Electrodes for Fin Tube Welding**Characteristic for BF 1**

- high speed welding
- no undercuts
- weld surface (not too concave)
- low flux consumption
